

Export Test Cases to another Project

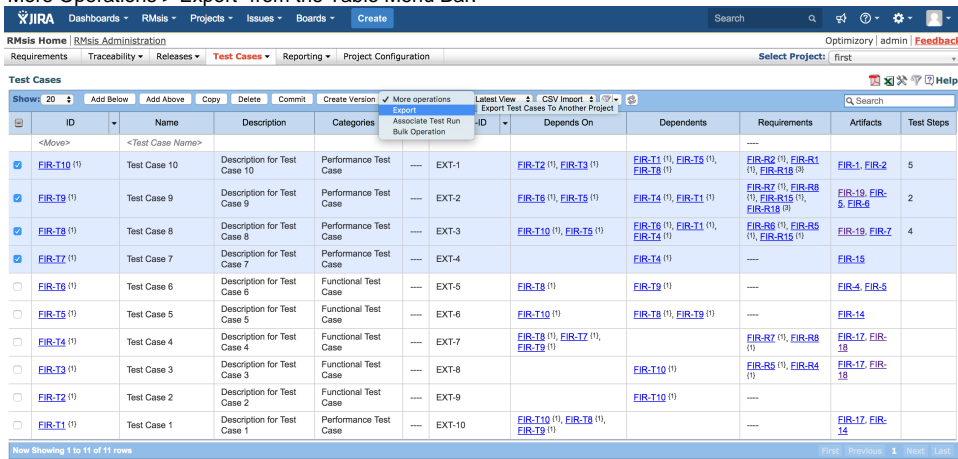

Using this feature you can export a set of Test Cases from one project to another. This feature is useful from Test Case re-usability perspective as well.

Overview of Implementation

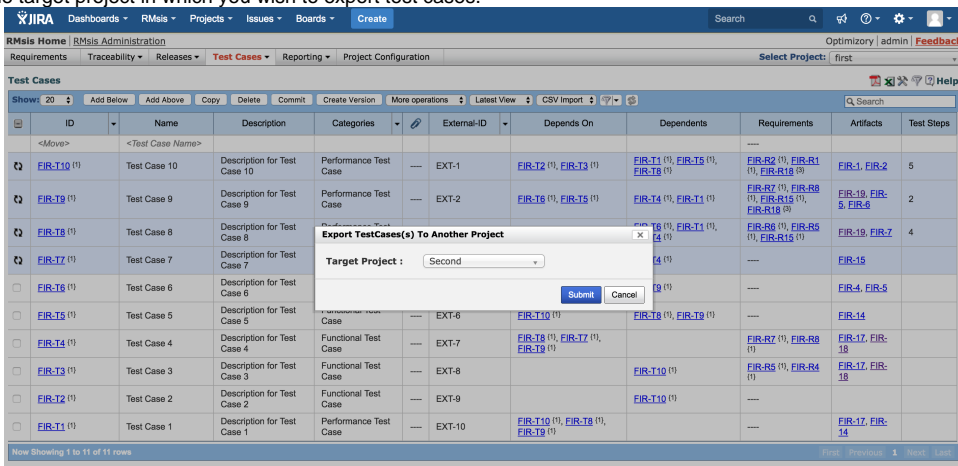

1. The operation will create a new Id for Test Cases in the new project.
2. The attachments will also be copied.
3. The versioning of test cases will not be preserved in new project.
 - a. If you have created multiple versions of a test case, then different versions of a test case will be created as separate test cases in the new project.
4. System will preserve the Committed / Un-Committed state of the Test Case.

User Interface

1. Notes and Recommendations
 - a. It is highly recommended that all the desired Test Cases should be exported in one single operation. It is easier to delete a Test Case in the target project than iterating through the process.
2. The Test Cases export process is described below:
 - a. Use multi-select to select all Test Cases you wish to export.
 - b. Click on "More Operations > Export" from the Table Menu Bar.

- c. Select the target project in which you wish to export test cases.

- d. Click on "Submit" button
 - e. The selected Test Cases will be appended to the Test Cases Table of target project.
