

Hooks tab LHS pane

In left hand side of hooks tab, following sections are there as shown in the below screenshot:

1. Test Hook Category

In vREST, four types can be configured as specified below.

- a. Pre Test Run Hooks
 - These hooks are executed just after creation of test run and before the execution of test cases.
- b. Post Test Run Hooks
 - These hooks are executed after the test run execution completes.
- c. Pre Test Case Hooks
 - These hooks are executed just before the execution of test case.
- d. Post Test Case Hooks
 - These hooks are executed after the test case execution completes.

2. Third Party Integrations section

- vREST provides few built-in templates for integration with most popular third party tools.
 - JIRA Template
 - Slack Template
- You may directly import those template to integrate with those tools.
- For more information, please read [Import built-in templates](#).
- If you are looking integration with any other tool in your environment then drop your query at support@vrest.io.

3. Quick guide links section

- It will show you the most used guide links related to this functionality.
 - [Learn about hooks](#).
 - [Data format of hook variables](#).

Test Hook category

- Pre Test Run Hook
- Pre Test Case Hook
- Post Test Case Hook
- Post Test Run Hook
