

# Viewing previous test run results

To view the API requests actually fired by vREST during the execution of a Test Run, please follow the steps below:

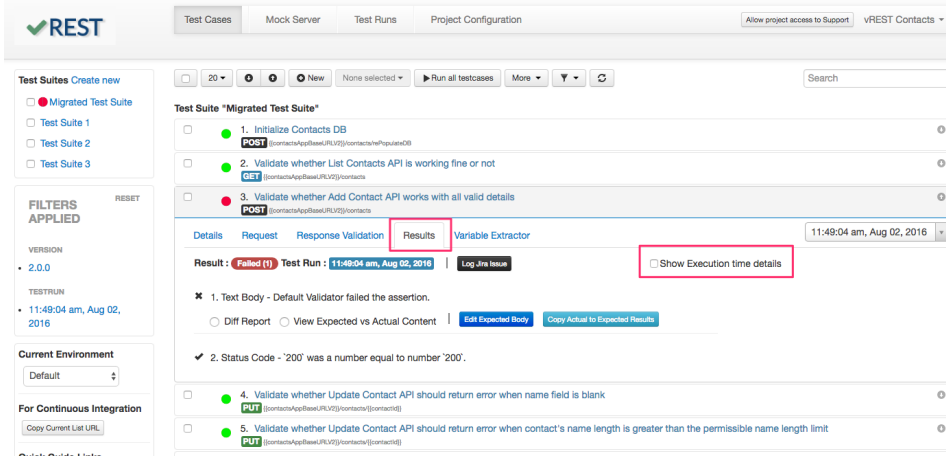

1. First filter on desired test run or do not filter if you want to debug last executed test run.

2. Now expand the test case which you want to debug.

3. And open the "Results" tab of this test case and click on "Show Execution Time Details".

4. vREST will show you the actual HTTP request details which was executed during the last / filtered test run. If vREST is sending the request data correctly and your actual response is wrong then you should verify your server code for this.

The screenshot displays the vREST web interface. At the top, there are navigation tabs for 'Test Cases', 'Mock Server', 'Test Runs', and 'Project Configuration'. The main area shows a test suite 'Test Suite 3' with a filter '2.0.0' applied. The current test run is '3. Validate whether Add Contact API works with all valid details', which has failed. The interface shows the 'Actual request body' as a JSON object with fields like 'name', 'email', 'designation', and 'organization'. Below that, the 'Actual response body' is shown as a JSON object with fields like 'id', 'name', 'email', 'designation', 'organization', 'country', 'aboutMe', 'twitterId', and 'facebookId'. A message at the bottom indicates that the 'Default Validator failed the assertion'.

**Execution time request details:**

**Actual request body:**

```
{ "_id": null, "name": "John Doe", "email": "john.doe@example.com", "designation": "Chief Technical Officer", "organization": "Example.com", "country": "India", "aboutMe": "My name can be used as a placeholder name and I don't have any identity.", "twitterId": "fake.john.doe", "facebookId": "fake.john.doe", "githubId": "fake.john.doe" }
```

**Actual response body:**

```
{ "id": "57a030594c8b119547000023", "name": "John Doe", "email": "john.doe@example.com", "designation": "Chief Technical Officer", "organization": "Example.com", "country": "India", "aboutMe": "My name can be used as a placeholder name and I don't have any identity.", "twitterId": "fake.john.doe", "facebookId": "fake.john.doe", "githubId": "fake.john.doe" }
```

✖ 1. Text Body - Default Validator failed the assertion.
