

Setting up enterprise licence

This guide will provide details on setting up vREST Enterprise licence in your enterprise instance.

Upon successful installation of vREST Enterprise server, when you access the vREST Enterprise server for the first time, it will provide you the system code for your instance. Use this system code to generate your licence key from vREST Cloud (<https://vrest.io>).

Note: vREST licence is based on URL on which you are accessing vREST. **So, make sure, you are accessing vREST Enterprise through public facing URL before generating the licence key.**

If you want to run vREST Enterprise server behind nginx or Apache HTTP, then we recommend you to do this task before generating vREST enterprise licence. And vREST enterprise server must be run on the root context path.

1. Open vREST Enterprise server via **public facing URL**. This will open up the screen as shown below:

2. Copy System code provided as shown in above screenshot.
3. Now generate a licence key by either [purchasing a new enterprise subscription](#) or [creating a trial enterprise subscription](#).
4. In the enterprise subscription entry, provide the copied system code and click on "Get Licence Key" button to generate the licence key as shown in below screenshot.

#	Type	Id	Subscription Period	# Users	Interval	Subscription Amount	Status	System Code	Actions	Remarks
1	Trial Subscription [Enterprise]	---	May 22nd, 2017 -- Jun 6th, 2017	50	---	Free	Active	enter system code	Get Licence Key	• Current subscription

5. Now, provide the admin email, password and paste the copied licence key in your vREST Enterprise licence setup page.
6. Now, click on submit button to proceed.
7. That's it. Your enterprise instance is ready.
