

Test Cases tab main body

The main body contains a list of test cases as shown in below snapshot:

The screenshot displays a web interface for test cases. At the top, there is a header for the test suite, labeled "Test Suite 'Test Suite 1'" and "Test Suite Header". Below this, a list of test cases is shown, each with a checkbox, a number, a title, and a method (GET) and URL (http://example.com/test-case). The first test case, "1. Test Case 1", is expanded to show its details. The details section has tabs for "Request", "Response Validation", "Results", and "Variable Extractor". The "Request" tab is active, showing fields for "URL", "Description", "Method", "External Id", "Versions", "Tags", "Condition", "Loop source", "Authorization", and "Wait for seconds". The "Description" field is empty. The "Method" is GET. The "Condition", "Loop source", "Authorization", and "Wait for seconds" fields are also empty. The "URL" is http://example.com/test-case. The "External Id", "Versions", and "Tags" fields are empty. The "Test Case Body" label is positioned to the right of the details section. At the bottom, there is a pagination section labeled "Showing 1 to 6 of total 6 records" and "Pagination" with a page number "1" and navigation arrows.

In the above snapshot, following sections are there:

1. Test Suite header
Test Suite header defines the test suite for the test cases which are below the test suite header until the next test suite header appears.
2. Test Case header
Test Case header section shows the test case summary, request method, request URL and a selection checkbox to select the test case. When you click on the test case header, test case body will appear.
3. Test Case body
Test Case body section shows further details of the test case. It contains the following tabs:
 - a. Details Tab
 - b. Request Tab
 - c. Response Validation Tab
 - d. Results Tab
 - e. Variable Extractor Tab
4. Pagination
Pagination section provide options to navigate to other pages of the test case list.
