

# API Mocks - main body

The main body contains a list of API mocks as shown in below snapshot:

The screenshot displays a user interface for managing API mocks. At the top, there is a list of five API mocks, each with a selection checkbox, a title, a method, and a URL. The first mock is selected. Below the list, the details for the selected mock are shown in a tabbed interface. The 'Request' tab is active, displaying fields for URL, Description, Method, Versions, and Tags. A 'Wait for seconds' field is also present. The pagination section at the bottom shows 'Showing 1 to 5 of total 6 records' and a navigation bar with buttons for '1' and '2'.

**API mock header**

**API mock body**

**Pagination**

In the above snapshot, following sections are there:

1. API mock header  
API mock header section shows the API mock summary, request method, request URL and a selection checkbox to select the API mock. When you click on the API mock header, API mock body will appear.
2. API mock body  
API mock body section shows further details of the API mock. It contains the following tabs:
  - a. [Details Tab](#)
  - b. [Request Tab](#)
  - c. [Response Tab](#)
3. Pagination  
Pagination section provide options to navigate to other pages of the API mock list.
