## How to use

Lets take an example, how you can configure basic auth for your test cases in vREST.

1. First Configure a Authorization of type "Basic Auth" like this

# Configure Authorization for APIs

◀ Back to List

Tip: To share the authorization details to your team members you may tick the "Share Authorization Details?" field.

Share Authorization Details?

Name Admin Login

Auth Type Basic Auth

## Basic Authorization

Username admin

Password .....

Close

Save

2. Then use this configured authorization in your test cases like this

11. Validate whether create resource API works on providing valid input  
PUT https://vrest.io/demo/m/RVD/create\_resource

Details Request Response Validation Results Variable Extractor
