

Scheduling vREST Test Cases

This post will explain, how you can schedule test cases written in vREST. vREST does not provide direct support for scheduling test cases on its own server. But you can easily schedule test cases written in vREST with the help of any external scheduler like cron in Linux/Mac and Windows Task Scheduler on Windows.

Please follow the following guides according to the Operating system of the machine on which you want to schedule the test cases:

- [Scheduling on Linux/Mac](#)
- [Scheduling on Windows](#)
