

Pact - Contract Management for Jira

Pact - Contract Management for Jira is in early stage of evolution and we are seeking suggestions and directions from our users. Please provide feedback on our [service desk portal](#).

Pact

Pact - Contract Management for Jira helps you organize and manage your contracts as a set of Jira issues. It gives you a holistic view of each contract, which is further disintegrated as Requirements and Negotiations.

Key Features

- Contract Dashboard
- Holistic Graphical View
- Contract Breakdown
- Saves all data inside your Jira Cloud Site
- Export graphs

Etymology

Contract

We create an Issue Type inside your Jira project as Contract.

Requirements

Each contract has multiple Requirements, we designate multiple Issue Types as Requirements.

Negotiations

Each Requirement has multiple Negotiations, all Issue Types linked with Requirements are treated as Negotiations.

Relationships

There are designated Link Types between Contract and Requirement, and Requirement and Negotiations.
