

# Generating set of Test Cases against Requirements

RMSis now provides an easy mechanism to generate a set of Test Cases against the Requirements. In order to do so,

- the user needs to multi-select all the relevant requirements and select the option **Create Blank Test Cases**; as shown below
- However, if a parent is selected, a Test Case will be generated only against the parent.
- If the user wishes to generate Test Cases against leaf level requirements, then they will have to be explicitly selected by the user.

The screenshot shows the Jira Software interface for the 'Requirements' section. A context menu is open over a requirement row, highlighting the option 'Create Blank Test Case(s)'. The table below displays a list of requirements with various attributes.

Summary	Description	BL	Categories	Depends On	Dependents	Effort (days)	Release Id	Priority	Criticality	Feasibility
Requirement 1	Description for Requirement 1	---	Category 1, Category 2, Category 3	FIR-R2 (1)	FIR-R9 (1), FIR-R10 (1)	0	Version 1.0	Minor	Low	Yes
Requirement 2	Description for Requirement 2	---	Category 2	FIR-R13 (1), FIR-R12 (1)	FIR-R1 (1)	0	Version 1.0	Minor	Low	Yes
Requirement 3	Description for Requirement 3	---	Category 3	---	---	0	Version 1.0	Minor	Low	Yes
Requirement 4	Description for Requirement 4	---	---	---	FIR-R10 (1), FIR-R12 (1)	0	Version 2.0	Minor	Low	Yes
Requirement 5	Description for Requirement 5	---	---	---	---	---	---	---	---	---
Requirement 9	Requirement 9	---	---	FIR-R1 (1)	FIR-R18 (1), FIR-R17 (1)	0	???	Minor	Low	Yes
Requirement 10	Requirement 10	---	---	FIR-R1 (1), FIR-R4 (1)	---	0	???	Minor	Low	Yes
