

# Release Attributes

The RMSis Releases are closely associated with JIRA versions. In general the following rules apply

- Some of the Release Attributes are computed automatically.
- Rest of the RMSis Release attributes can be modified independently only before it's **Sync with JIRA**.
- Once it is **Sync with JIRA**, the values of common attributes are acquired from the corresponding JIRA versions.

A release has the following attributes:

- **Release Name:** This field specifies name of the release.
- **Release Description:**
  - Before sync with JIRA, this field contains a user provided description of release.
  - After sync with JIRA, this is a copy of the Release Description provided in JIRA.
- **Planned Effort:** This field specifies planned effort for the release. This field is non editable and calculated automatically from the following
  - Planned Effort specified with the Requirements
  - Planned Effort specified with the artifacts
  - Total Effort calculated by summing up the above two.
- **Actual Effort:** This field specifies actual effort for the release. This field is non editable and calculated automatically from the following
  - Actual Effort specified with the Requirements.
  - Actual Effort specified in the attached artifacts.
  - Total Effort calculated by summing up the above two.
- **Planned Date:** This field specifies planned date for the release and it is set when a Sync with JIRA is triggered for the first time.
- **Actual Date:** This field contains current date specified for the release.
  - It is set whenever a Sync with JIRA happens.
  - The Releases are sorted as per this date.
- When RMSis releases are not defined in JIRA, the Project Lead can specify planned and actual dates on RMSis side.
- **Release Status:** This field specifies status of the release.
  - Before Sync with JIRA, possible values are "Planned", "On Going" and "Closed".
  - When the JIRA version is set to Released, then RMSis Release status is changed to Closed.

## Notes

- If an artifact is associated with two fixed versions, then it's effort is equally distributed among those.
