

Filters for relationships

RMsis offers some very useful filters in Reverse Traceability Function, which can be used to quickly determine

- Issues Associated / Not Associated with Requirements
- Issues Associated / Not Associated with Test Cases

The following images show an example of each type.

This screenshot shows the Jira Reverse Traceability interface. The 'Requirements' column is expanded, and a filter dropdown is open. The filter options are:

- Not Linked With Requirement
- Linked With Requirement

Jira Reference	Summary	Artifact Type	Priority	Assignee	Requirements	Test Cases	Status	Bug	Task	Epic
