

Introduction

Links Explorer Traceability & Hierarchy is an interactive traceability app that allows user to trace, analyse and report the progress of their project while working within Jira. Using Links Explorer Traceability & Hierarchy you can create Traceability reports, display Jira Issues links and hierarchy in a tree view.

Overview

Links Explorer Traceability & Hierarchy is an excellent enhancement over traditional Jira issue links. It allows you to trace, analyse and report the progress of linked JIRA issues, Epics, and Portfolio hierarchies dynamically. This application enables quick navigation of issues and links from a single window and thus greatly enhances the efficiency of users.

Key features of Links Explorer Traceability & Hierarchy

- Traceability & Reporting - Improves Traceability and Reporting by providing powerful reporting engine to generate reports on
 - Traceability Report - Generate end to end traceability report displaying linked issues across projects.
 - Version Report - Displays issue links in hierarchical format for a particular version. Also supports Epics hierarchy
 - Saved filter Report - Displays issue links in hierarchical format for saved filters in Jira. Also supports Epics hierarchy
- Display Issue hierarchy - Links Explorer Traceability & Hierarchy provides a unified tree view to display the complete hierarchy of linked JIRA issues (including Epics and Portfolio hierarchies).
- Perform Impact Analysis - Identify hidden impact due to any linked issue (across projects) and analyse the potential risks & delays.
- Issue Details - View important issue details within the tree - issue type, link type, status, priority, issue key, summary.
- Optional Preview - The optional preview displays information including Affected Versions, Fix Versions, Assignee, and Reporter.
- Filters - Filter on issue types, link types and link direction to see only the relevant information.
