

Introduction to Links Explorer Traceability & Hierarchy for Jira Cloud

Links Explorer Traceability & Hierarchy is an interactive traceability app that allows user to trace, analyse and report the progress of their project while working within Jira. Using Links Explorer Traceability & Hierarchy you can create Traceability reports, display Jira Issues links and hierarchy in a tree view.

Overview

Links Explorer Traceability & Hierarchy is an excellent enhancement over traditional Jira issue links. It allows you to trace, analyse and report the progress of linked JIRA issues and Epics dynamically. This application enables quick navigation of issues and links from a single window and thus greatly enhances the efficiency of users.

Key features of Links Explorer Traceability & Hierarchy

- **Main Issue View**- A unified tree view to display the complete hierarchy of linked Jira issues
- **Issue type Traceability Report**- End to end traceability report displaying issues of any type linked with your Jira issues in an easy to comprehend tabular format
- **Links View Traceability Report**- End to end traceability report displaying issues linked in form of various relationship type with your Jira issues in an easy to comprehend tabular format.
- **Perform Impact Analysis** - Identify hidden impact due to any linked issue (across projects) and analyse the potential risks & delays.
- **Issue Details** - View important issue details within the tree - issue type, link type, status, priority, issue key, summary.
- **Optional Preview** - The optional preview displays information including Status, Priority, Assignee, and Reporter.
- **Filters** - Filter on issue types, link types and Priority to see only the relevant information.
