

Different language support

Question : Is RMs is available in different languages other than English?

Answer :

- At present RMs is localised for English only.
- An issue **RMI-166** is already logged to provide Internationalization / Localization support or support for other languages .
- However, in the current implementation, in terms of language support for content, multibyte / UTF-8 is supported and you should not face any issue on this front.
- Hence you can create a database with UTF-8 character set and enter/ view characters of different languages for various fields and attributes.
- However, the Menu Options and Error messages are embedded into the application and will remain in English.
- **Note :**
 - In order to help us to prioritise the issues/ feature requests, if this issue is not tracked against your ID in our CRM, please let us know by sending a mail to <support@optimizory.com>
 - Once you inform us, this issue will be tracked against your ID.
 - Subsequently, we will keep you abreast of the development of this issue and will inform you once the fix for this issue is available.
