

# Hierarchical classification of test cases

In this presentation, we are going to see how test cases can be classified in hierarchical way using a hierarchical custom field.

1. We have taken an example where we need to classify test cases such that the test cases belong to Test suits for UI and Performance testing of Planned Requirements and Release section of RMsis.
2. So our hierarchy for test suits would be like :
  - Planned Requirements
    - UI
    - Performance
  - Release
    - UI
    - Performance
3. So our Test Cases should be classified between UI/ Performance testing of Planned Requirements or UI/ Performance testing of Releases.
4. Creation of Hierarchical Custom field.
5. Classifying test cases according to custom field.
