

Sorting in Non Hierarchical Tables

In non-hierarchical tables, sorting function is available through the drop-down option in the table headers, as shown below.

The screenshot shows a table interface with a header row and a data row. The header row contains columns: 'Id' (with an upward arrow icon), 'Requirement Summary', 'Description', 'Categories', and 'Est. Effort (days)'. A dropdown menu is open over the 'Id' header, showing 'Sort Ascending' (with a downward arrow icon) and 'Sort Descending' (with an upward arrow icon). The table also features a toolbar at the top with buttons for 'Add Requirement', 'Delete Requirement', 'More Actions', and 'CSV Import'. The data row contains a checkbox, a text field with 'new requirement', and empty cells for the other columns.

<input type="checkbox"/>	Id ↑	Requirement Summary	Description		Categories	Est. Effort (days)
<input type="checkbox"/>	new requirement					

Currently, sorting is NOT implemented for:

- All Custom Fields
- Unplanned Requirements:
 - Vote
- Release Tab
- Test Case / Test Run
 - Status
